“Doctor,
I feel awful”

Once he might have been diagnosed as “anxiety state”. Today, you know he might be a depressive, but it doesn’t seem as simple as all that. The truth of the matter is that patients don’t always fit neatly into diagnostic categories. They may suffer from such diverse symptoms as depression, agitation, loss of appetite and tension-fatigue at the same time.

The great strength of ‘Aventyl’ is that its beneficial actions range widely over the symptoms which plague these

problem patients. ‘Aventyl’ is not merely an anti-depressant, nor is it a combination of drugs. It is a *single substance* which relieves a constellation of mental and emotional symptoms embracing depression, anxiety and their effects on awareness and mood.

‘Aventyl’ is not a monoamine oxidase inhibitor, and no serious side-effects have been reported at the recommended dosage.

management
of inflammatory
dermatoses

In the treatment of inflammatory dermatoses, *Remiderm*, which combines a highly effective antiseptic, halquinol, with the well-established topical corticosteroid, triamcinolone acetonide, rapidly relieves the inflammatory, pruritic or allergic symptoms, and at the same time, protects the lesion from secondary infection. Where infection is already present *Remiderm* hastens recovery by controlling the causative organisms, but, unlike the antibiotic-corticosteroid combinations, *Remiderm* has not been found to cause skin sensitization and cannot induce the development of antibiotic-resistant bacteria.

Remiderm is available in two forms: cream and ointment. Each contains triamcinolone acetonide 0.025% and halquinol (Squibb chlorhydroxyquinoline) 0.75%. Packs: 15 gm. tubes, 7/9 basic NHS price.

Lasix—the new

4-chloro-N-(2-furylmethyl)-5-sulphamoylanthranilic acid

Less potassium loss

produces only half the potassium loss of the thiazides for the same volume of water excreted; conversely, doubles water and sodium excretion for the same potassium loss as the thiazides

Starts to act where thiazides stop

effective where thiazides fail: when thiazides give no further response Lasix gives an immediate increase in diuresis

Precise control of response

diuresis lasts about four hours, can be adjusted to suit patient's convenience—taken at teatime diuresis is over by bedtime: response is directly proportional to dosage

Clinical findings

“the Na/K ratio for [Lasix] (2.53) was considerably better than that for hydrochlorothiazide (1.64). The same difference was apparent in urinary potassium concentration, which was 34.8 milliequivalents/litre when [Lasix] was given, as opposed to 67.7 milliequivalents/litre during hydrochlorothiazide therapy.”

Lasix “is distinctly superior in diuretic action, fluid output being 200% greater and sodium excretion 167% greater than the levels achieved by hydrochlorothiazide.”

“The danger of hypokalaemia appears to be less during [Lasix] treatment than during treatment with other diuretics at present in use. No other significant side-effects have so far been observed.”

Experimental Investigations and Clinical Trials of Lasix

Dtsch. med. Wschr., 1963, **88**, 1695

Some facts about Lasix

Lasix belongs to a new group of compounds with diuretic activity that is valuable whenever the risk of hypokalaemia has to be minimized, and it obviates the concurrent administration of potassium salts. It has a powerful effect on sodium and water excretion, and works even in severe sodium retention when thiazides have failed

Lasix has a superior action to other diuretics and it has an exceptionally high therapeutic reserve in comparison with them, so that it is possible to increase the dosage with safety up to 500 mg. daily until the desired therapeutic effect is obtained. The usual dosage range is 40-120 mg.

Lasix is also one of the very few diuretics that can be administered intravenously. Onset is immediate and lasts for up to two hours. This makes Lasix particularly valuable in emergency treatment.

Lasix acts by inhibiting tubular reabsorption of sodium. It is indicated in cardiac, hepatic and renal oedema. Lasix is very well tolerated: few side-effects have been reported, none serious

Lasix is one of the safest and most potent diuretics to be introduced to the medical profession this decade.

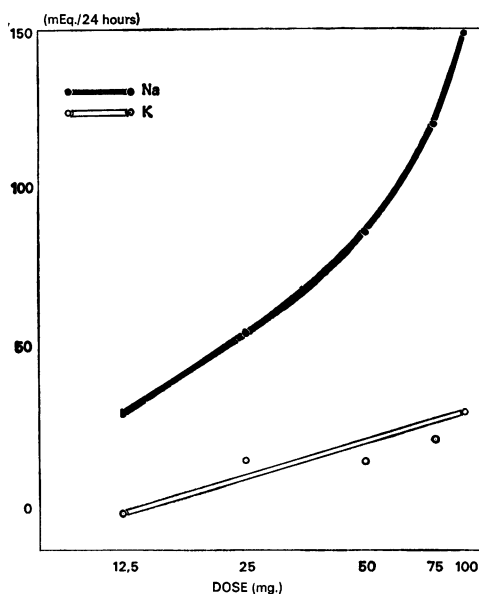

Figure 1 shows the oral dose-response curve in healthy human subjects. At the presently recommended doses sodium excretion is still rising steeply while potassium excretion shows only a small linear increase¹

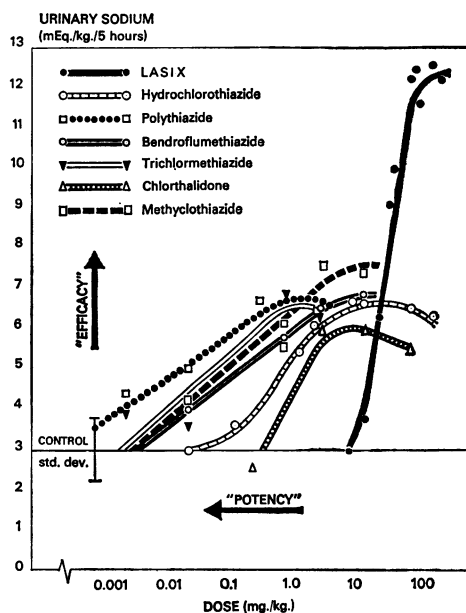

Figure 2 shows the dose-response curves of different diuretics in rats, and demonstrates dramatically how much more powerful is the diuresis produced by Lasix.³

Presentation and Price: Lasix is presented as tablets of 40 mg. in containers of 50 at a basic NHS price of 32/6d; and in ampoules containing 20 mg. in 2 ml. in packages of 5 at 17/9d. These prices are subject to P.T.

The value of NEMBUTAL. The harassed housewife who needs light sedation during the day; the stress-loaded businessman who cannot get to sleep; the true insomniac . . . all these are candidates for Nembutal therapy. A small dose of Nembutal t.d.s. helps to smooth out life's rough edges, calming the patient and helping them to face life's problems rationally. Where insomnia is due to mild tension, a slightly larger sedative dose is often enough to let the patient drift into a natural sleep. Larger hypnotic doses bring sleep to even the most stubborn case.

The qualities of NEMBUTAL. It is rapid in onset, and has a duration of action of about 4 to 6 hours, which lessens the possibility of hangover. It may be used for any degree of CNS depression, from mild sedation to deep hypnosis, by adjusting the dose.

Nembutal is available in three strengths 30 mg ($\frac{1}{2}$ gr), 50 mg ($\frac{3}{4}$ gr), 100 mg ($1\frac{1}{2}$ gr) also as Elixir containing approx. 20 mg/5 ml. For daytime sedation: One 30 mg capsule t.d.s. (One 50 mg

FURAMIDE is the simplest treatment for amoebiasis, requiring no injections, enemas or special diets. Cure rates are high—75% to 80% in the acute stage and up to 100% in the chronic condition. Side effects are unlikely, and hospitalization is not normally required, making treatment cheaper than the older forms of therapy. Extensive clinical trials in many tropical and sub-tropical countries have borne out these claims.

Dosage is simple—1 tablet three times daily for ten days in patients of average weight.

Each Furamide tablet contains 0.5G of Entamide (diloxanide) furoate B.P. Both Entamide and Furamide are products of Boots research.

Alphosyl—today's most widely prescribed product used specifically for the treatment of Psoriasis

In case after case, Alphosyl's effectiveness in controlling psoriasis is repeatedly confirmed. Even in chronic and refractory cases outstanding results have been achieved despite the failure of all previous forms of therapy. Evidence of four recent clinical trials^{1,4,5,6} shows that from a total of 249 patients treated with Alphosyl, 111 were completely cleared, 80 were 75%–99% improved, 44 were 50%–74% improved and only 14 showed less than 50% improvement.

Why Alphosyl is so effective In Alphosyl, allantoin and a specially refined coal-tar extract were combined for the first time. Allantoin has been found to be particularly effective in loosening psoriatic scales,³ while the keratoplastic effect of coal-tar is well known.³ Alphosyl

is non-greasy and non-staining and vanishes on application. It is notably safe,^{1,3} being free from the risks which are found in other forms of treatment such as arsenicals, mercury, corticosteroids, x-ray, etc. It certainly deserves a trial in all cases of psoriasis.

New Alphosyl Cream Following the success of Alphosyl Lotion, this coal-tar allantoin combination is now available in Britain as a lubricating cream. The cream base has proved a particularly effective vehicle for Alphosyl as it incorporates a combination of free fatty acids (saturated and unsaturated) naturally occurring triglycerides, sterols and esters to give the lipid phase of the base a significant resemblance to the lipoid array of normal human skin.⁶

Alphosyl Lotion formula—special coal-tar extract 5%+allantoin 2% in a smooth, non-greasy lotion base.

Alphosyl Cream formula—allantoin 2%+90% alcoholic extract of coal-tar (5=1) 5% in a vanishing cream base.

HAYGEN & BRONCHAGEN

HAYGEN and BRONCHAGEN are the logical outcome of research by the Bencard Allergy Unit in the field of specific desensitising vaccines for the treatment of hay fever on the one hand and allergic asthma and perennial rhinitis on the other.

Clinical observation has indicated that the allergens incorporated in Haygen are responsible for the symptoms of more than 80% of cases of hay fever, while those of Bronchagen are responsible for the symptoms in at least 70% of cases of allergic asthma and perennial rhinitis.

With simplified treatment based on case history alone, patients may expect substantial relief or complete freedom from symptoms following therapy with Haygen or Bronchagen.

FOR GERIATRIC PATIENTS safe, comfortable, effective HERNIAL SUPPORT

Because each Spencer Support is designed to order to meet the patient's individual needs, results are demonstrably superior.

The patient shown on left, at the age of 74, developed a left ventral hernia following surgery fourteen years previously. A left inguinal hernia resulted from the long wearing of a cast following a hip injury 3 years later. "Stock" supports proved ineffective. A Spencer Support as shown was prescribed with excellent results. Her Spencer gives safe, comfortable and effective control of the hernias—improves and maintains posture—protects and supports the weak muscles of old age. With the aid of her Spencer, the patient runs her household, does all her own work, and—as she says—still has time "to enjoy life."

Prescribe Spencer with confidence for men, women, children—for abdomen, back, breasts. No case is too difficult for Spencer Designers!

Solace for 365 frustrating days...

Compulsive eaters need more than just a curb on appetite

Overeating is often a defensive reaction to stress—anxiety, boredom, loneliness, frustration.

DUROPHET-M contains not only the most effective appetite depressant available today (laevo- and dextro-amphetamine, ratio 1:3) but also the well-tolerated calmative methaqualone, to alleviate those underlying stresses—and make weight loss more certain. Capsules are available in two strengths stated in terms of laevo- and dextro- amphetamine content. Both strengths contain 40 mg. methaqualone.
